Ferdinand Magellan (1480-1521. g.)

Ono što je Odisej za mitologiju antike, to je za nas Magellan. Vjerojatno je najpoznatiji moreplovac svijeta svih vremena. U veliku avanturu, prvo putovanje oko zemaljske kugle, krenuo je 20. rujna 1519. g. s pet malih brodova i 265 ljudi. On je prvi preplovio Tihi ocean. Poslije njegove pogibije 27. travnja 1521. godine, plovidba je nastavljena i završena 1522. godine sa samo jednim brodom i 18 ljudi, koji su se vratili u Španjolsku kao prvi ljudi koji su oplovili svijet. Magellanovo putovanje je priča na vodi i s vodom.

FERDINAND MAGELLAN (1480–1521)

What Odysseus was to ancient mythology, Magellan is to the modern age. Perhaps the most famous navigator of all time, he began the first circumnavigation of the Earth on September 20, 1519, with five ships and 265 men. He was the first to cross the Pacific Ocean. After his death on April 27, 1521, the journey continued and was completed in 1522 with only one ship and 18 men returning to Spain—the first people to sail around the world. Magellan's story is one of water and through water.
